

12 Meter Add-On Kit for the Hustler 4/5/6-BTV Vertical Antennas

DXE-AOK-12M Patent Pending DXE-AOK-12M-INS Revision 0

> DXE-AOK-12M Installed on a BTV with optional Tilt Base and Direct Coax Feedpoint

© DX Engineering 2010 P.O. Box 1491 · Akron, OH 44309-1491 Phone: (800) 777-0703 Tech Support and International: (330) 572-3200 Fax: (330) 572-3279 E-mail: DXEngineering@DXEngineering.com The DX Engineering **DXE-AOK-12M** kit adds 12 meter coverage to the Hustler BTV series of vertical antennas without giving up any existing band coverage. This kit will operate across the entire 12 meter band with an SWR of 1.5:1 or less and adds negligible wind loading to the antenna.

No disassembly of the existing antenna is required.

Simply install this kit, check the tuning (if needed, make some minimal tuning adjustments to the vertical) and you're on the air with an additional band.

If your BTV is installed on the roof or in an elevated position, four resonant radials for 12 meters should be added (9 ft., 4-5/8 inches each).

Included Materials

- Pre-assembled 14 ga stranded, tin coated, FLEX-WEAVE™ 12 Meter element wire with soldered ring terminals
- Three Stainless Steel Band Clamps with Threaded Studs
- Bottom Stainless Steel mounting bracket
- Upper Insulated Mounting Bracket
- Two 9 inch Hot Roz[™] with black vinyl covers for one end
- Scotch-Brite® Pad for cleaning the BTV base lower aluminum element connection
- All Stainless Steel Hardware

DXE-AOK-12M shown installed on a Hustler 6 BTV with optional DXE-TB-3P Tilt Base and optional DXE-AOK-DCF Direct Coax Feed

Parts List

Item # Figure 1	Description	Quantity
1	12 M Add On Kit - Bottom Bracket	1
2	12 M Add On Kit - Top Bracket	1
3	12 M Add On Kit - Mounting Plate	1
4	FLEX-WEAVE [™] Wire assembly, 14 ga. with soldered terminals	1
5	1-1/4" Stainless Steel Studded Clamp	3
6	# 10-24 Stainless Steel Hex nut	7
()	# 10 Stainless Steel Split washer	8
8	# 10 Stainless Steel Flat washer	11
9	# 10-24 x 1/2" Stainless Steel Hex Head Bolt	2
(1)	# 10 x 1" Stainless Steel Fender washer	1
(1)	10-24 x 5/8" Stainless Steel Carriage Bolt	3
(12)	# 10 Stainless Steel External Star Washer	3
(13)	# 10-24 Stainless Steel Wing Nut	1
(14)	1/8" Diameter x 9" Stainless Steel Hot Rodz™	2
(15)	1/8" Black Vinyl Cap	2
	Scotch-Brite® Pad	1

Assembly

Before you start installation, measure the low SWR frequencies of your Hustler BTV on each band and record those measurements. This will assure your antenna is working properly before adding the 12 meter kit, and aid in making minor adjustments afterwards, if needed.

1. Assemble one of the studded band clamps to the wide end of the bottom bracket using a star washer, flat washer, split washer and nut as shown below.

2. Install the FLEX-WEAVE[™] Wire Assembly to the narrow end of the bottom bracket using a hex bolt, flat washer, star washer, split washer and nut as shown below.

3. Assemble the top bracket to the mounting plate using two carriage bolts, flat washers, split washers and nuts as shown below.

4. Install the two studded band clamps to the mounting plate using flat washers, split washers and nuts as shown below.

5. Install the Hot Rodz[™] to the top bracket using a carriage bolt, fender washer, split washer and wing nut. The Hot Rodz[™] fit in the grooves on the bottom side of the bracket. Adjust the length of the Hot Rodz[™] to approximately 2 inches as shown below. Hand tighten the wing nut to the Hot Rodz[™] are held firmly in place. Install the black tips on the longer ends as shown below.

Attaching to the Hustler Vertical

The orientation of the 12m kit on the Hustler BTV is important. The positioning of the 12 meter kit must be such that it does not interfere with the tilting of the antenna. If you are using a DX Engineering Tilt-Base, tilt the antenna down to make installation of this kit to the Hustler BTV.

No matter which Hustler BTV model you have, installation of the 12m kit is identical. The kit upper mounting plate attaches directly to the vertical just below the 10m trap as shown using the stainless steel studded band clamps. Final Adjustment of this upper assembly will be done after you connect the FLEX-WEAVETM 12 meter wire from the lower mounting bracket.

Clean the BTV base section using the included Scotch-Brite® pad to ensure a good connection. The bottom mounting bracket is attached to the BTV base section using the stainless steel studded band clamp as shown.

Note: Be sure that the connection between the lower mounting bracket and the BTV base section tubing is clean and the studded band clamp is tight. Some surface film may have developed on the BTV tubing over-time. Poor connections here can cause erratic readings. Clean the area using the included Scotch-Brite® pad and use a small amount of Penetrox A for good electrical connection between the band clamp and the antenna base element.

Connect the FLEX-WEAVETM 12 meter wire assembly to the top bracket using the hex bolt, flat washers, star washer, split washer and nut as shown below.

Final positioning of the top and bottom brackets should be done so the FLEX-WEAVE[™] 12 meter wire is parallel to the Hustler BTV lower element. The Top and Bottom Brackets are in line and the wire running between the brackets should be snug, but not so tight that it puts strain on the antenna element.

Tuning

An antenna analyzer is the best way to adjust the low SWR frequency of the antenna. Measurements should be made at the antenna using a short (5 or 6 ft) piece of 50Ω coax between the antenna and the analyzer. If you are too close to the antenna your presence can affect the tuning, if you are too far, the coax length may act as a radial and resonate. Taking readings close to the antenna also eliminates the possibility of a long or marginal feedline influencing the tuning or causing erratic readings. If necessary, tune the antenna for low SWR on 24.930 MHz. Normally, the SWR readings go down somewhat and the bandwidth readings increases once the feedline is reconnected and you measure the SWR at the operating position.

Adjustment of the low SWR frequency is done by slightly loosening the wing nut holding the Hot RodzTM and adjusting the length of the Hot RodzTM. Adjust both Hot RodzTM longer to go lower in frequency or shorter to go higher in frequency. Both Hot RodzTM should be adjusted equally and should not need to be adjusted more than a couple of inches. Make adjustments in small steps. 1/2 in. of adjustment should change the resonant frequency by about 75 kHz.

Notes on Tuning the Vertical

The 12m add-on kit electrically couples to the rest of the vertical and does have some influence on the tuning of adjacent bands. If retuning is required make minor adjustments as necessary. Refer to the DX Engineering BTV Installation and Assembly Guide available from DX Engineering at: www.dxengineering.com

In some installations, particularly those with very good soil conditions or a very good radial system, the traps themselves may have been changed from factory dimensions during the initial installation of the vertical to resonate the vertical in each band. In those cases where the traps have already been adjusted, leave them as-is for now.

Check the vertical for low SWR on each band and note those frequencies. This will help determine what adjustments are needed. After installation and tuning of the 12m kit, the BTV will likely be tuned to about the same frequency in the 10 meter band and a little higher in the 15 and 20 meter bands. No difference is likely on 30, 40 or 80 meters. In most cases, re-tuning to the desired frequencies for each band can be accomplished by adjusting the tubing dimensions of each section as described in the DX Engineering Hustler BTV Installation and Assembly Guide.

Technical Support

If you have questions about this product, or if you experience difficulties during the installation, contact DX Engineering at (330) 572-3200. You can also e-mail us at:

For best service, please take a few minutes to review this manual before you call.

Warranty

All products manufactured by DX Engineering are warranted to be free from defects in material and workmanship for a period of one (1) year from date of shipment. DX Engineering's sole obligation under these warranties shall be to issue credit, repair or replace any item or part thereof which is proved to be other than as warranted; no allowance shall be made for any labor charges of Buyer for replacement of parts, adjustment or repairs, or any other work, unless such charges are authorized in advance by DX Engineering. If DX Engineering's products are claimed to be defective in material or workmanship, DX Engineering shall, upon prompt notice thereof, issue shipping instructions for return to DX Engineering (transportation-charges prepaid by Buyer). Every such claim for breach of these warranties shall be deemed to be waived by Buyer unless made in writing. The above warranties shall not extend to any products or parts thereof which have been subjected to any misuse or neglect, damaged by accident, rendered defective by reason of improper installation, damaged from severe weather including floods, or abnormal environmental conditions such as prolonged exposure to corrosives or power surges, or by the performance of repairs or alterations outside of our plant, and shall not apply to any goods or parts thereof furnished by Buyer or acquired from others at Buyer's specifications. In addition, DX Engineering's warranties do not extend to other equipment and parts manufactured by others except to the extent of the original manufacturer's warranty to DX Engineering. The obligations under the foregoing warranties are limited to the precise terms thereof. These warranties provide exclusive remedies, expressly in lieu of all other remedies including claims for special or consequential damages. SELLER NEITHER MAKES NOR ASSUMES ANY OTHER WARRANTY WHATSOEVER, WHETHER EXPRESS, STATUTORY, OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS, AND NO PERSON IS AUTHORIZED TO ASSUME FOR DX ENGINEERING ANY OBLIGATION OR LIABILITY NOT STRICTLY IN ACCORDANCE WITH THE FOREGOING.
